How To Use This Directory

Before using this directory please consider these important points:

GENERAL INFORMATION

- a) All listings, except for U.S. and Canadian Recording & Mastering Studios, appear alphabetically.
- b) Listings appearing under the headings "U.S. Recording & Mastering Studios" or **recording studios** in the Canada section, are presented geographically by state and then by city/metro area. In this geographical format, where there may be many listings in the same city or metro area, details that would be common to all (i.e. city/metro area name, state and telephone area code) appear only in the sub-head for each particular city or metro area to avoid needless repetition.
- c) Brand names used in Equipment listings appear in all CAPS.
- d) Studios advertising in this directory appear in **boldface**. See the advertisers index for the exact location of ads.

U.S. EQUIPMENT MANUFACTURERS/IMPORTERS

- a) Equipment listed is divided into 5 sub-categories: **Recording & Monitoring** (consoles, tape recorders, microphones, amplifiers); **Special Electronic** ("outboard gear" including compressors, delay systems, equalizers, noise reduction systems, echo chambers); **Video** (video recorders, cameras, monitors); **Professional Film** (motion picture cameras, dubbers & recorders, projectors, screens); **Tape Equipment & Accessories** (replacement heads, demagnetizers, bulk erasers)
- b) Companies engaged in any of the many aspects of studio design and/or construction have **Studio Designers & Builders** in their product descriptions with specific limitations or details indicated. A categorical listing of companies providing these services immediately follows the U.S. Equipment listings.
- c) Equipment items listed in this section are of professional or semi-professional grade. If you wish to locate companies involved in the manufacture/import of home audio/video/tape equipment please refer to the **Billboard Audio/Video/Tape Sourcebook**.

BLANK & BULK TAPE PRODUCT CHARTS & LISTINGS

- a) This section outlines the major manufacturers and/or loaders of all types of Blank Loaded and Bulk-Raw audio and video tapes. Pertinent information such as manufacturer, brand name or product designation, tape type or width, coatings and list prices, are laid out in a convenient, easy to use grid format. Information and list prices have been supplied by the companies listed and are subject to change without notice.
- b) Alphabetical listings with addresses, phone numbers, personnel and branch offices of companies listed on the charts immediately follow.

U.S. RECORDING & MASTERING STUDIOS

- a) Recording studios (of 8 tracks or more) as well as disk mastering studios are listed geographically in this section.

b) It is assumed that all recording studios listed can provide basic recording, editing and mixdown services.

c) **Important Note:** Information regarding the number of studios and tracks available at any of the studios in the directory appears in parentheses at the end of the main body of each listing. The number of recording studios is given first, followed by the maximum number of tracks on any one analog and or digital recorder. All track designations are for analog recorders unless otherwise indicated. Examples: (1 studio. 24-tr.) or (1 studio. 24-tr. analog; 32-tr. digital). In the case of multiple studios only the recorder with the greatest number of tracks is given. This does not necessarily mean that all studios have the number of tracks stated. Example: (3 studios. 24-tr.) does not necessarily mean 3 24-tr. studios.

INTERNATIONAL SECTION

All of the above applies except for the following points:

- a) All listings, except Canadian recording studios, are alphabetical.
- b) There are no tape charts. Tape information is presented in standard alphabetical listing format.
- c) Only recording studios 16 tracks or larger are listed.
- d) Listings in some countries may have names reversed to facilitate alphabetization. Example: Studio Billboard = Billboard (Studio)

ADDITIONAL POINTS TO REMEMBER

- a) Make note of any legends that may appear below any of the section heads. They contain important information that applies to that section's listings.
- b) There is an advertiser index on the last page of this directory that will enable you to locate a particular company's advertisement quickly.
- c) Sometimes it is necessary to "jump" portions of some categories to other parts of the directory. Watch for notations, usually at the bottom of the pages, and follow the listings to the page indicated.
- d) When contacting a geographical "listee" by telephone please be sure you have the correct area code as given in the head for each particular city or metro area.
- e) For a concise description as to the listing format, contents and location of each section please refer to the Table of Contents.
- f) When contacting a company, either through a listing or an advertisement, please say you saw it in **Billboard's International Recording Equipment & Studio Directory**.

NOTE: If you were not listed in this year's directory and you feel that your company's activities qualify for a listing in one of the sections please contact us at the address below so that you may be put on our mailing list for future editions of this and other Billboard Directories.

Separating the mother from the master

Stanton's 881S

Stanton-The Professional in The Recording Industry

Application – The Metal Mother – Stanton plays it back

Once the recording studio has delivered the lacquer disc to the plating plant it is sprayed with liquid silver making it electroconductive, and then electroplated with nickel, which is separated from the lacquer. The nickel is now a negative image called a master, and has, instead of a groove, a ridge that comes to a point. The master is treated and nickel plated again and upon separation forms a mother, a positive metal record. Engineers rely on the Stanton 881S cartridge in playback evaluation of the mother.

Stanton's 881S Professional Calibration Standard Cartridge is a sophisticated, low mass phono pickup that features the patented Stereohedron® stylus tip for

truest fidelity and gentlest possible treatment of the record groove. Lightweight, high energy magnets allow reduced mass and higher output than conventional magnets. And each Stanton 881S that comes off the production line has been tested and individually calibrated with the test results packed in each unit to assure the very finest professional quality product regardless of application. *From disc cutting to disco to home entertainment your choice should be the choice of the Professionals. . . Stanton cartridges.* © 1979 STANTON MAGNETICS

Brand Usage Response Survey

This special Billboard survey of recording studio equipment usage was compiled from questionnaires returned by 642 U.S. recording and mastering studios from June through August 1982. Note that the only recording studios included are those with a capability of 8-track or greater, which differs from previous surveys since they did not have a minimum track requirement for inclusion. Not necessarily reflecting the exact total situation in U.S. studios, the calculations show the percentage of studios using each brand and the percentage of brand responses attained by each brand.

Listed below each category heading are the number of studios reporting information for the particular category and the number of brand responses reported by the studios. Since a studio could list more than one brand, the number of brand responses always will be greater than the number of studios.

The percentage of studios figure, which measures the strength of a

brand independent of the other brands, typically will have a total percentage figure per category that far exceeds 100%. The percentage of brand responses figure, which accounts for a particular brand's position relative to the other brands, will total 100% per category. Note that the percentage of brand responses does not account for the number of items of equipment used by each studio. Thus, this percentage is not a market share percentage of actual equipment pieces used.

To expand upon the difference between the two percentages, consider the following example. Assume that a category has 500 studios reporting an average of two brand responses each or a total of 1000 brand responses (500 x 2). If 250 studios report that they use a particular brand, then it has 50% of the studios (250/500) and 25% of the brand responses (250/1000).

For information about regional and track breakdowns, contact Bob Hudoba, Billboard, 2160 Patterson St., Cincinnati, Ohio 45214.

Studer's Secret of Success

In years past, the Studer A80VU has earned widespread acceptance by the world's premier recording studios. And this success story is far from over; top studios continue to choose the A80VU MKIII over other "all new" machines. The secret of this success lies in three basic rules:

1. If it can't be made better, don't change it.
2. If improvements can be made, make them – even if they don't show on the outside.
3. Use longer production runs to hold down final cost.

Now in its third generation, the Studer A80VU series once again offers state-of-the-art performance at a surprisingly modest price. The new A80VU MKIII system incorporates several significant improvements, including:

- **Transformerless Line Amps:** Low output

impedance assures optimum performance even with long cable runs.

- **New Headblock:** Tight spacing of erase and record heads permits exceptionally accurate punch-in and punch-out.
- **Remote Unit:** Full channel remote with 20-address memory autolocator.

Instead of repackaging these changes in an "all new" machine, Studer kept the basic transport – a design with an unprecedented reputation for reliability. Also, because basic tooling costs have long since been amortized, the A80VU MKIII's price has been held down, thus offering a better price/performance ratio.

How much better? Call your nearest Studer representative for details. He'll help make our secret the key to your success.

The image shows two MCI JH-110 series reel-to-reel tape recorders. Each recorder is mounted on a dark, heavy-duty metal cabinet with four casters. The recorders have two reels on top and a control panel with various knobs, switches, and meters. The background is a plain, light color.

The original is
still the greatest.

JH-110B High Profile Cabinet

We at MCI are very flattered that the JH-110 Series has become the most imitated professional recorder in the world, especially in view of some simple facts. Only MCI has been making professional recorders for professionals, and consoles to match for 25 years. Only MCI has risen above "Hi-Fi" hype to publish complete performance curves on all its magnetic recording instruments for any professional to read and understand. Only MCI's transformerless design can deliver square wave response second to none in the industry. And only MCI sells its products through a small, carefully selected network of dealers who stand behind every product they sell. So if you're considering a new professional tape recorder in any format, take a close look at MCI. And discover the original.

**It takes you
where no reverb has ever
gone before!**

**The "X"
...the ultimate
reverb.**

Ultimate Sound Quality

Hear it to believe it! Enhanced clarity and openness with full audio bandwidth for sound quality second to none — a new world standard.

Split Reverberation

A Lexicon first! The "X" incredibly can operate as two separate stereo output reverbs with each channel independently adjustable.

Ultimate Repertoire

33 factory programmed pre-sets from 13 basic program families are provided. Punch up any of 10 Pages, 8 Halls, 6 Rooms/Chambers, 3 Hall/Page combinations plus 6 effects such as arpeggiated chordal resonance and

multiband chorus and delays. Or, recall any of 36 of your own pre-sets from non-volatile user registers.

Creative Versatility

New Dynamic Decay feature a lows separately controlled reverb times during pauses in program material and 6 individually adjustable pre-echos give new dimensions of expression.

Ongoing Factory Support

New programs/software updates are included free for 5 years after purchase excepting a small handling charge.

Call or write for a demo of the Ultimate reverb in your space.

IS THIS ANYWAY TO CUT A MASTER?

Masterdisk... a "cut" above the competition.

At **MASTERDISK** cutting your disks is serious business. Fine equalization and precision engineering can make a big difference and our mastering engineers working with Neumann and Studer equipment see to it that you'll get both.

But that's not all. At **MASTERDISK** you'll also get courteous and timely service. And the added security of knowing that your production is getting the same close attention that we give to all of our clients.

Clients like The Rolling Stones, Donald Fagen, Rush, Pat Metheny and the entire Musical Heritage catalog.

Before you invest in new studio monitors, consider all the angles.

No one has to tell you how important flat frequency response is in a studio monitor. But if you judge a monitor's performance by its on-axis response curve, you're only getting part of the story.

Most conventional monitors tend to narrow their dispersion as frequency increases. So while their on-axis response may be flat, their off-axis response can roll off dramatically, literally locking you into the on-axis "sweet spot." Even worse, drastic changes in the horn's directivity contribute significantly to horn colorations.

Introducing the JBL Bi-Radial Studio Monitors.

At JBL, we've been investigating the relationship between on and off axis frequency response for several years. The result is a new generation of studio monitors that provide flat response over an exceptionally wide range of horizontal and vertical angles. The sweet spot and its traditional restrictions are essentially eliminated.

The key to this improved performance lies in the unique geometry of the monitors' Bi-Radial horn! Developed with the aid of the latest computer design and analysis techniques, the horn provides constant coverage from its crossover point of 1000 Hz to beyond 16 kHz. The Bi-Radial compound flare configuration maintains precise control of the horn's wide 100° x 100° coverage angle.

Typical vertical

JBL 4430 vertical

And the Bi-Radial horn's performance advantages aren't limited to just beamwidth control. The horn's rapid flare rate, for instance, dramatically reduces second harmonic distortion and its shallow depth allows for optimal acoustic alignment of the drivers. This alignment lets the monitors fall well below the Blauert and Laws criteria for minimum audible time delay discrepancies.

But while the Bi-Radial horn offers outstanding performance, it's only part of the total package. The new monitors also incorporate JBL's most advanced high and low frequency transducers and dividing networks. Working together, these

components provide exceptionally smooth response, high power capacity, extended bandwidth, and extremely low distortion.

Judge For Yourself

Of course, the only way to really judge a studio monitor is to listen for yourself. So before you invest in new monitors, ask your local JBL professional products dealer for a Bi-Radial monitor demonstration. And consider all the angles.

SONEX

FOR KILLING BACKGROUND NOISE

SONEX is a special sound-absorbing acoustical foam with a sculptured anechoic design that absorbs noise four times better than acoustical tile or carpeting. It emulates the sound quality of a professional recording studio at a low cost, so your voice-over sounds rich and clean. Or use it when mixing to hear the real sound on tape. Or use it on location to trap the sound you want and to kill the noise you don't want.

Get the facts today. SONEX is manufactured by Illbruck/usa and distributed exclusively to the pro sound and A/V Industries by Alpha Audio, 2049 W. Broad Street, Richmond, VA 23220.

A black AKG C460B condenser microphone is shown diagonally against a dark background with a green grid. A green waveform is visible in the background. The microphone has 'AKG C460 B' printed on its body.

Because every
Sound

ends in
Silence

THE C460B

condenser microphone is designed for applications requiring the widest dynamic range. With its low self-noise (15dB SPL), the C460B captures sounds from silence to the most demanding sound pressure levels (135dB SPL; 148dB SPL with selectable attenuation). For information on additional unique features write to us.

The best in duplicating tapes made one better.

CrO₂

DPS

LHB

BASF, whose calibration tapes have long been the internationally recognized standard in the world, now offers the world's most complete line of high performance duplicating tapes. With the addition of our new CrO₂ chromium dioxide tape to our DPS and LHB oxide tapes, there is now a BASF duplicating tape for every recording need.

E-Z stack hubs save storage and provide easy handling.

Capable of duplicating at speeds up to 120 IPS, these three tapes offer superior consistency, reliability and exceptional winding characteristics. They're available in 60-minute sizes with lengths of 7,200 and 8,200 feet or 90-minute sizes with lengths of 9,600 or 12,000 feet. And their color-coded, easy-stack hub and package design saves storage and provides easy handling, yet still allows for 40 hubs per master carton. But best of all, these three duplicating tapes all cost less than the competition.

CrO₂ delivers studio master performance.

Our new CrO₂ provides audio performance that is virtually undistinguishable from a studio master recorded at 15 IPS. Its extended high frequency Maximum Output Level (MOL), combined with the world's lowest background noise, makes our CrO₂ the perfect duplicating tape for true audiophile quality recordings. And its true chromium dioxide formulation is extremely clean and stable even at high duplicating speeds.

DPS offers exceptional high frequency output and more.

The BASF DPS is an advanced ferric oxide formula duplicating tape designed for the most demanding recordings. It offers superior high frequency sensitivity, and is bias compatible with LHB formulation so you can easily interchange without rebiasing.

LHB combines consistency, reliability and economy.

While our LHB tape costs less than our DPS, it still offers outstanding performance. Its superior uniformity and controlled slit-edge quality ensures a consistently clean running tape even at the highest speeds.

BASF Calibration Tapes — the World Standard.

Calibration tapes from BASF have long been the world standard. Today, they're available in open reel as well as cassette. BASF not only makes a DIN-Calibration Tape 475 (Cr), they also make a DIN-Calibration Tape 475 (Fe). Both come with flux deviations controlled to within ± 0.5 dB.

To find out how you can get the best duplicating tapes—for less—call us collect at (617) 271-6642 or 271-4000 or at one of our regional sales offices listed below.

"The Electro-Voice Sentry[®] 500 is a monitor by design."

Greg Silsby talks about the New Sentry[®] 500 studio monitor...

Everyone expects a studio monitor system to provide a means of quality control over audio in production.

True, other audio test equipment can supply you with valuable data. But that data by itself is incomplete and only displayed in visual form.

Only a true studio monitor speaker system can deliver an accurate indication of audio quality in... audio! After all, this is the language of the trained ear and doesn't require a complex interpretation process.

I believe the Electro-Voice Sentry 500 Studio Monitor System will meet your every expectation.

What's a "studio monitor?"

The term "studio monitor" is often a misnomer. It's easy to tack a label on a box and call it a "studio monitor" without including the best precision engineering available, and careful attention to application design. Too often, these all-important considerations are traded-off for such marketing reasons as high cosmetic appeal, a particular type of popular sound, and low component manufacturing cost. While all of this may translate into high profit margins for the manufacturer it does nothing to produce a reliable standard for audio testing and evaluation.

Linear frequency response

The Sentry 500 follows the well-established Electro-Voice tradition of combining the most advanced engineering and manufacturing technology available. The Sentry 500 has been carefully thought-out and built to meet the specific needs of the audio professional. Like the smaller Sentry 100A, the Sentry 500 provides linear response throughout its range (40-18,000 Hz \pm 3dB). In fact, because the two systems share this linearity, program material may be mixed on one, sweetened on the other, with

complete confidence in quality. Acoustic "Time Coherence" (the synchronous arrival of acoustic wave fronts from both high and low-frequency drivers) has been maintained through careful crossover design and driver positioning.

Constant Directivity

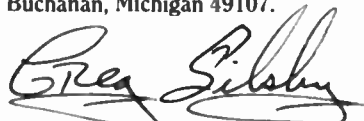

The Sentry 500 is a Constant Directivity System, benefitting from years of E-V experience in the design and application of constant directivity devices. Utilizing a unique E-V-exclusive high-frequency "Director", the Sentry 500 provides essentially uniform coverage over a 110° angle from 250 Hz on up to 10 kHz and 60° dispersion from 10 kHz clear out to 18,000 Hz! And it does this on both the vertical and horizontal axes. This means the "sweet spot", once a tightly restricted area large enough for only one set of ears, has been broadened to allow accurate monitoring by the engineer, producer, and talent—all at the same time. That's what we call Constant Directivity.

A monitor by design

To qualify as a truly accurate test device, a monitor speaker system must faithfully reproduce the wide dynamic range required by today's music and current digital recording techniques, and do it with low distortion. This is no problem for the Sentry 500 which combines the high efficiency of an optimally-tuned Thiele-aligned cabinet to the brute power handling of Electro-Voice Sentry components. Consider what you get with proven

E-V components in the Sentry 500: the Sentry 500 will deliver 96 dB at one meter with only one watt and yet will handle 100 watts continuous program material with 6 dB of headroom. That's 400 watts on peaks! The same Super-Dome[®]/Director combination which maintains uniform dispersion of linear response out to 18 kHz also handles a full 25 watts of program power or 5 times the power handling capacity of most "high powered" tweeters. After all, tweeters should convert electrical energy to acoustical energy—not to smoke and fire.

The Sentry 500 is another no-nonsense Electro-Voice Sentry design with the incredible performance and credible price you've learned to expect from EV. I'd like to tell you the rest of the Sentry 500 story and send you the complete Engineering Data Sheet. Write to me: Greg Silsby, Market Development Manager/Professional Markets, Electro-Voice, Inc., 600 Cecil Street, Buchanan, Michigan 49107.

POWER. PRECISION. CHOICE.

Build yourself a stronger reputation by selecting the unique flexibility and professional performance of two new Crown power amps: the PS-400 or the PS-200.

Choose only the special, low-cost options you need: plug-in balanced input, active or passive; 70-volt transformer; dual fans. Install them easily, quickly, anytime, in any combination – thanks to the fresh, innovative design of these amps.

Built-in features make these amps the first choice of professionals: instant mono/stereo conversion, terminal strip connectors plus phone jacks, IOC™ and signal-present indicators, low-frequency protection, and much more.

Select the power level you need. For full-time, reliable performance, both amps are built in the best Crown tradition. PS-200 rated (FTC) at 135 watts per channel into

4 ohms, PS-400 at 260. Mono ratings into 8 ohms are 270 watts (PS-200) and 520 (PS-400).

Introduce yourself to the new Crown MULTI-MODE™ output circuit, a new, three-deep design that eliminates audible distortion, and introduces a degree of precision sound reproduction that will delight performers and audiences.

Complete information on specifications and prices, for the amps and the optional accessories, is now available from Crown. For quick action, simply fill in the blanks below and send this corner of the ad to Crown.

We broke the rules to give you your first big break.

1/4 INCH, 8-TRACK SYSTEM. \$3,635.*

Finally, you can afford to sit down and make your own music. Instead of struggling as a part-time studio owner just to pay for equipment you can't afford.

It's called Fostex Personal Multitrack. An incredible technological breakthrough — 8 tracks on 1/4" tape — from the same engineering team that first put 8 tracks on 1/2" tape.

And while the Fostex A-8 lets you build your tune for a fraction of your usual cost, we're not giving you economy at the expense of quality.

For one thing, we guarantee adjacent crosstalk at -45dB. (That's exactly what the 1/2" 8-track gets.) But you'll more than likely get -50dB or better. And with Dolby** C NR built-in you'll get a noise-free,

sonically true recording of everything from a kick drum to a triangle.

You'll also be happy to know the A-8, like all Fostex recorders, can give you a third hand. A remote foot pedal for punching in and out. So you can make your own music and operate your own machine. Alone.

What's more, the A-8 is truly portable. Unlike a Hammond B-3, the entire Fostex 8-track system will fit in the front seat of your car.

Which brings us to the companion Fostex 350 mixer. 8-in, 4-out with an auxiliary stereo buss, 2 stereo phone inputs, 2 head phone jacks, multiple patch points and dual parametric equalizers on every input channel. Whew.

Plus, it's laid out so simply you don't have to be an engineer to work it.

So don't get side-tracked by anything else. Head straight to your Fostex dealer. Then you'll see just how big a break this 8-track system really is.

Fostex®

Personal Multitrack

Some people
 come to Miami
 for sunshine,
 but you
 should come
 for Coconuts!

It's great to know you can come enjoy all South Florida's good times and still call home to report a productive session in Miami's newest studio.

At Coconuts Recording Co. the studio itself is as well-designed as it is beautiful. We offer the best equipment available including our MC1 536 automated console, 24 track fully Dolby-ized tape system and a full array of special effects devices. What's really special is that all these "toys" plus a Yamaha concert grand are all there for your use at no extra cost.

We know that technical facilities alone aren't everything. So we've made an effort to create a private, homelike atmosphere as well. Even the vending machines are free. All reasons why you should pick Coconuts in Miami!

WHAT IN THE WORLD IS A MILLION DOLLAR SOUND STUDIO DOING IN BOGALUSA?

It's recording on 24 tracks of the most technically advanced equipment, in the peace and quiet of a country atmosphere.

Some folks are funny. They don't want to record their music in a big city. They want to stay where the pace is slow and unhassled. The pressure is off when you're recording here. They say sounds come out better that way. We've got a place for them.

Just ask some of the artists that have recorded at our studio like: KANSAS/WILLIE NELSON/THE DIRT BAND/LeROUX/STEVIE WONDER/POTLIQUOR/PERRY COMO/MELANIE/DICK VAN DYKE/PETE FOUNTAIN/MAZE/THE NEVILLE BROS./JOHNNY WINTER/DOC AND MERLE WATSON/DICK STABLE/WAYNE NEWTON/THE MILLS BROS./BROOK BENTON/GATEMOUTH BROWN/HARVEY SCALES/FLOYD BROWN/THE WILLIAMS BROS./THE HARTFIELD BROS.

Can We Add Your Name?

Twice as ready to roll!

Now we're busing AND trucking—Reelsound's new tractor trailer mobile unit is ready to roll! This latest addition to the Reelsound fleet enables us to produce the highest quality sound recordings with all the latest equipment at almost any location. In addition to our MCI 24 track equipped Bus, our new Sierra/Hidley designed truck studio is equipped with MCI 600 automated series console, two MCI 24 tape machines, MCI half-inch and quarter-inch 2 tracks and an overdub room. Out-board equipment includes Urie, dbx, and Valley People limiters and processing units, DL-1, Space Station, Ursa Major 8 X 32 digital reverb and a complete collection of microphones. We're equipped with a SMPTE system for video sweetening and interlocking of multitracks. All of which means we're geared for the best possible concert and TV

production sounds. And behind the reels we have the same experienced team with 12 years of know-how. Ask some of the people we've worked with for our golden and platinum results: Ted Nugent, Carole King, Journey, Tom Petty, Genesis, Joe Ely, Bee Gees, Willie Nelson, Frankie Beverly and Maze, Quarter Flash, Christopher Cross, Loretta Lynn, Alabama, Oak Ridge Boys, Statler Brothers, Tommy Tutone, The Gap Band, Judas Priest, and MTV.

CONTROL ROOM

“EVERYONE WANTS TO COME BACK”

We dare say that all who have worked in Polar Studios have been satisfied. Satisfied with the environment, the techniques and the service we can offer. Having been here once, you are sure to come back. But then, Polar Studios are unique in several respects. They are located in the centre of Stockholm, close to hotels, restaurants and other services. They are minutely designed in conformity with the demands of the artists for fine working atmosphere with perfect technical and instrumental equipment.

TECHNICAL EXCELLENCE

“We have 2 studios, both fully equipped to the same high standard. Both have a 32 and 4-track 3M recording facility and a digital editor.

This means:

- We can do independent digital recordings.**
- Editing in either of the 2 studios.**
- Multi-track editing between the 2 studios.**

COST

We offer extremely competitive rates. We also have a large selection of instruments including a Bosendorfer 9 feet grand piano, a vast number of synthesizers, electric pianos, percussion instruments and almost everything you could possibly need—**AT NO EXTRA CHARGE.**

We can also make your travel and accommodation arrangements, so all you have to worry about is your music.

THE CUTTING ROOM

We have now opened a cutting room with the newest Neumann equipment and, of course, a digital master machine. It goes without saying that the new cutting room is equipped to the same impeccable standards as our recording studios. By being linked to the studios, we can offer direct to disc recording—if so desired.

Take Us For Granted

With 24 tracks going, you don't have time to reach over and adjust for tape-induced level variation. You want to be able to forget about the tape.

Which is why we test every reel of our 2" Grand Master® 456 Studio Mastering Tape end-to-end and edge-to-edge. To make certain you get a rock-solid readout with virtually no tape-induced level variation from one reel of 456 to

another or within a single reel.

No other brand of tape undergoes such rigorous testing. As a result, no other brand offers the consistency of Ampex Tape. The consistency that lets you forget our tape and concentrate on the job.

ACCURACY — NOT FLATTERY

Knowing exactly "what's on the tape" is of paramount importance to the professional recording engineer and producer. Unfortunately, many recording, mixing, mastering and listening rooms are less than ideal, making truly accurate monitoring difficult.

For over a decade, permanently installed Westlake Audio studio monitors have been the worldwide choice of professionals who demand accurate reference monitors. Now, that same precision is available in the Westlake Audio BBSM series of Portable Reference Monitors.

The BBSM's pinpoint stereo imaging, wide bandwidth, totally symmetrical polar pattern and coherent wave front, even when monitoring as close as 18 inches, are a result of a unique combination of drivers, crossover and mounting configuration. Best of all, this has been achieved in a size that makes these Reference Monitors easy to carry with you from studio to studio.
