# Big News About Something Small.

## The CPI Compact Satcom MPA.

Our new Compact Medium Power Amplifier (CMPA) is big news in the portable satcom market. It's ideal for SNG, flyaway and small earth terminals.

The CMPA packs high efficiency in a 5.25" single rack drawer.

The amplifier is also easy to use, featuring microprocessor control. Digital and analog control interfaces make the CMPA a snap to integrate into the system. Plus, it's easy to maintain with modular construction and built-in fault diagnostics — all in a rugged design that can stand up to a world of conditions.

And, as with all CPI amplifiers, the CMPA is backed by the industry's largest sales and global service network.

No matter where in the world your story breaks, CPI's CMPA will be there transmitting the news.

Give us the opportunity to tell you more, call us.

# HDTV BROADCASTERS

ARE YOU LOOKING FOR  
OUT OF THIS WORLD QUALITY?

## Then your transmission tube choice has to be EEV

EEV has set up a special HDTV Engineering Group to provide broadcasters and transmitter manufacturers with assistance for maximizing the HDTV performance of their transmitters, whether they be new or modified conventional tube equipped units.

Transmitters equipped with EEV's IOT tubes have already carried HDTV signals both in laboratory and "over the air" environments. With a track record like this where else should you go?

## EEV Broadcast Products

# Catch The Spirit on GMT/The Gospel Music Television Network...24 Hours a Day!

The GMT Network provides value-added music entertainment

**Gospel Music Television is 24 hours of Southern Gospel Music entertainment for the entire family without having to teach, preach, discuss doctrinal issues or soliciting viewers for money. GMT allows you to relax and enjoy the Greens, Statesmen, Crossroads**

**Quartet, Kingsmen, and many more seven days a week. You will also enjoy the lively uplifting music videos, and our gospel concert events. In addition, enjoy our comedy hour with the entire family on Saturday nights.**

**Call your cable operator TODAY to insure you receive Gospel Music Television.**

# TELEVISION DIGEST

## With Consumer Electronics

Late-breaking news in broadcasting, cable, pay TV, consumer electronics and related industries. For all those decision-makers who have a big stake in electronic communications ... from conventional broadcasters

to marketers of TV sets and VCRs ... from cable operators to home computer manufacturers...for all those executives involved in providing home-based electronic communication services.

# Description of Station Directory

## THE STATION MAPS

The only official and uniform rough guide to a station's physical coverage is found in the files of the Federal Communications Commission. Each TV station grantee is required to submit to the Commission its coverage contours predicted on the basis of engineering formulas designated by the Commission. The FCC specifies three grades of service as a general indication of the probable quality of reception.

The FCC does not intend or expect the predicted coverage contours, submitted by each station, to reflect whether a signal is received or not received at any specific location. Rather, the Commission regards the contours as a general guide to probable reception. The basic use made by the Commission of the contours is as a tool to determine where to allocate channels to minimize interference among stations.

Though all stations and applicants are required to submit predicted contours to the FCC, stations may also file contours based on actual measurements of transmitted signals. Under FCC rules, such filings are not mandatory, and only a relatively few stations have offered such measurements voluntarily. The Commission has no official and uniform rules for measuring service contours; such submissions are associated with stations' files but are not given official status by the Commission.

The maps are intended to serve as guides. It should be emphasized that the use of maps for legal proceedings, such as those before the FCC, may require precision greater than that reasonably obtainable in maps of the size employed in the *Factbook*.

The three grades of predicted contours required by the FCC are as follows:

**Grade B Service:** The quality of picture expected to be satisfactory to the median observer at least 90% of the time for at least 50% of the receiving locations within the contour, in the absence of interfering co-channel and adjacent-channel signals.

**Grade A Service:** Satisfactory service expected at least 90% of the time for at least 70% of the receiving locations.

**Principal City Service:** Satisfactory service expected at least 90% of the time for at least 90% of the receiving locations.

We obtained the predicted contour maps from the FCC files or from the stations. We publish two contour lines, "Grade A" and "Grade B."

## NIELSEN TV STATION CIRCULATION

The *Average Weekly Circulation* estimates are based on NSI (Nielsen Station Index) diary households from the most recent February, May, July and November survey periods. These Sunday-Saturday 7 a.m.-1 a.m. average quarter-hour tuning shares are based on commercial television stations only.

## DEFINITIONS OF NIELSEN TERMS

**Designated Market Area**—An area comprised of all counties wherein the combined share of audience for the home market commercial station(s) is larger than the combined share of audience for any station(s) assigned to another home market.

**Television Households**—A television household is an occupied dwelling unit having one or more television sets. Updated estimates of TV households in each county, rounded and expressed in tens, are prepared annually by the Nielsen Research Department. Those estimates are derived by applying percent television set ownership estimates, county by county, to the estimates of total households made by Market Statistics.

**Cable Television Households**—A cable television household is an occupied dwelling unit which subscribes to some level of delivery service for television signals, rounded and expressed in tens.

## — NEW AREA CODES —

State	Before	After	Effective Date	State	Before	After	Effective Date	
Connecticut	203	203	August 28, 1995	Minnesota	612	612	March 17, 1996	
					320	Remainder of previous 612		
		880		Missouri	314	314	January 7, 1996	
					573	Remainder of previous 314, including Jefferson City & Columbia		
Florida	305	305	January 1, 1996	Ohio	218	218	March 9, 1996	
		954				330		Remainder of previous 218
	804	352			December 3, 1995	Oregon		503
	904		541	Remainder of previous 503				
Georgia	404	404	August 1, 1995	South Carolina	803	864	December 3, 1995	
		770				803		Remainder of previous 803 including Charleston and Florence
Illinois	708	847	January 20, 1996	Tennessee	815	815	September 11, 1995	
		708				423		Central Tennessee, including Nashville, Murfreesboro & Clarksville
	708	708			August 3, 1996	Virginia		703
	630		540	Remainder of previous 703				

**Non-Cable Television Households**—A television household which receives broadcast television signals, rounded and expressed in tens.

**TV Penetration**—The percent of total homes having one or more television sets at the time of the surveys. TV penetration uses current regional penetration estimates derived by the Advertising Research Foundation from U.S. Bureau of the Census surveys conducted in accordance with ARF specifications.

**Average Weekly Circulation**—The estimated average number of different television households viewing a particular station at least once per week, Monday-Sunday, Sign-on to Sign-off.

**Average Daily Circulation**—The estimated average number of different television households reached by a particular station on each day of the week, Sign-on to Sign-off.

## SURVEY METHODS, DESCRIBED BY NIELSEN

Nielsen collects household tuning over a four week measurement period using a diary methodology. Telephone calls are made to a sample of listed and unlisted telephone numbers in the survey area. The telephone calls enlist the cooperation of the household for a one week survey, verify names and addresses among listed households and obtain names and addresses for unlisted households. In addition, the households are asked several basic questions regarding their household composition and television set ownership. Diaries are mailed to all households where an address is available. Reminder phone calls are made and mailings sent during the diary-keeping week to encourage the household to record their tuning and return the completed diary.

As diaries are returned, they are edited using established procedures and are entered into a computer system for processing. In order to compensate for differences in response rates, a weighting methodology is used to adjust the final intab sample data so that the weighted sample is in balance with the universe for various household characteristics—including geography. NSI measures the viewing in over 200 television markets across the United States at least four times a year.

## EXPLANATION OF FCC SYMBOLS

FCC Filing Symbols:

1. BPCT: Broadcast Permit Commercial Television.
2. BMPCT: Broadcast Modification of Permit Commercial Television.
3. DOC: Docket (designation applied by FCC to hearing cases).
4. GRANTED: Date of authorization by FCC.

**Note:** "BPCT" and "BMPCT" designations, accompanied by numbers, are affixed by the FCC to applications for new or changed station facilities to identify each when it is accepted for filing. They therefore constitute file numbers. Each map in the Factbook is accompanied with its file number to facilitate reference to the Commission's official files. In each case, the file number used is the one affixed to the application for facilities which were subsequently authorized by the FCC and in use at the time this Factbook was published. "Docket" numbers are used in those few cases where the application was in a hearing status and a file number had not been assigned. The "granted" date indicates when the FCC approved construction of facilities involved.

After a station is completed according to the terms of its construction permit, it receives a license; this is identified by a number with a "BLCT" (Broadcast License Commercial Television) prefix. When a license is renewed, a number with a "BRCT" (Broadcast Renewal Commercial Television) prefix is employed. Applications for licenses or license renewals do not include requests for changes in facilities, thus do not affect predicted Grade A & B contours. Therefore, they are not employed as references in the Factbook.

The Grade A & B contours on the maps are predicted by station engineers according to the formulas designated by the FCC, as previously explained. They are based on facilities authorized or in use by stations at the time of Factbook publication.

Latitude and longitude coordinates on the station pages are taken from the FCC's official files. They currently are based on the North American Datum of 1927 (NAD 27). In 1995, the FCC will begin converting records to reflect the North American Datum of 1983 (NAD 83). The *Factbook* will continue to reflect accurately the data as on file at the FCC.

# U.S. Television Station Index

Data updated to November 1, 1995 unless otherwise indicated. Includes rate digests, personnel, facilities and other data.

## THE STATE PAGES

Following the map of each state, rankings for Nielsen's Designated Market Area Television Households are shown. DMA Household Rank is established by Nielsen.

The state pages also carry additional cross-reference material, indicating for example, those stations within the state that are identified with two or more cities, or with cities in another state.

Operating commercial and educational TV stations by VHF and UHF are shown for each state in a status report as of November 1, 1995.

## STATION PAGES

Rates, personnel and other data supplied by stations.

**RATE DIGESTS:** These show only the highest one-time rate charged by the stations. Most rates are also subject to frequency discounts, separate or additional rehearsal charges, talent & production charges, etc. For further details and for contract conditions, specifications etc., consult complete station rate cards, available from the stations on request.

**STATION POWER:** Powers shown are Effective Radiated Powers (ERP).

**NIELSEN DATA:** The individual stations show Total TV Households, both cable and non-cable, Average Weekly Circulation totals and an Average Daily Circulation total. For definitions of Nielsen terms, consult Description of Station section.

**SATELLITE STATIONS** are shown with a dash line pattern in relation to the parent listing. In the satellite listing the parent station is shown with a dash line pattern.
