TV STATIONS 1997

The Authoritative Reference for the Television, Cable & Electronics Industries

Published by Warren Publishing, Inc., 2115 Ward Court, N.W., Washington, D.C. 20037

Cable Volume No. ● **65** ● 1997 Edition

The first in a series of **DTV** updates from Comark

## DigitalTV. The big picture.

It's an exciting time to purchase a new TV transmitter. There are so many questions about the impact of DTV. Who can you turn to for answers?

**Comark is the world leader in UHF high power transmitters.**

Nobody knows UHF high power transmitters better than Comark. We invented the IOT amplifier in 1986. And over the past five years, have supplied the overwhelming majority of IOT transmitters worldwide. Today, IOT's are the standard technology for both analog and digital TV.

*We've dominated the IOT transmitter market for five years*

**Comark has been part of the DTV research team from the very beginning.**

MODEL HDTV STATION PROJECT, INC.

Our DTV knowledge comes from real world experience. Since the 1992 AD-HDTV tests at WRC

in Washington, DC, Comark has been the transmitter supplier of choice for virtually every major DTV test or demonstration.

**Comark is already well down the road to DTV.**

At NAB '96, we introduced the AdvantageTV series, the first transmitter designed specifically to meet the ATSC recommended standard. Engineered from the ground up for ease of use, low-cost maintenance and no-hassle installation, it's available as an air-cooled or water-cooled product at any required power level.

And it's only the beginning. In just a few months, we'll introduce new products and services that will make your transition to DTV even easier. We'll also introduce innovative solid-state

*Comark offers a transmitter that meets tomorrow's U.S. standard today.*

technologies that deliver ultra-high performance and reliability.

**Get our free guide, "DTV Questions & Answers."**

Call us today at (215) 822-0777 and ask for our new guide, which describes the issues broadcasters face today, and the innovative ways Comark is solving them. Or you can request it from [erainey@comarkcom.com](mailto:erainey@comarkcom.com).

Emmy Award Winner for Engineering Excellence

1996: DTV Transmitter  
for WRAL-HD, Raleigh  
First U.S. HDTV Station

1995: First ATSC-Tested Exciter

1993: First  
NTSC-HDTV Antenna

1990: RF Test Bed

## We took a few remarkable steps to give you the smoothest path to DTV.

As you begin planning your move to digital television (DTV), you'll want a partner who can give you the quickest, easiest and safest path possible. Harris would like to be your partner.

From the start of the revolution leading to DTV, we have had only one goal—to give you the smoothest path. So we've been willing to take the hardest steps ourselves, from developing the RF test bed used by the ATTC to evaluate every HDTV system proposed for the U.S., to delivering

the proven DTV transmitters operating on the air today.

The list of Harris' "firsts" is long. But they all add up to one simple benefit for you. No matter where DTV technology takes us, you can count on Harris for proven solutions. To learn what numerous major groups who have DTV Transmitter Equipment Agreements with Harris have discovered, please call. Find out how you can count on Harris to help you make the leap to tomorrow. Today.

## ARE YOU LOOKING FOR OUT OF THIS WORLD QUALITY?

### Quality Performance

EEV has been continuously developing innovative products for broadcasters for nearly 50 years. Our IOTs and Stellar Satcom Amplifiers are proof of our leading edge technology, both of which have already shown themselves to be the most advanced products available today for digital TV systems.

### Quality Products

Stringent quality procedures in our manufacturing plants allied with our application engineering expertise provide our customers with the most reliable products.

### Quality Service

Our dedication and commitment to customer support is unequalled in the broadcast industry. If you have a terrestrial or satellite transmission requirement, call us today and check us out.

POPULAR DESTINATIONS

POPULAR

HISTORY

NATURE

As producers, we know what is required of a good film archive, and have built the WPA Image Network accordingly.

To ensure the best **quality** of the film image, we stock mostly original camera elements, including 35mm negatives that go back to 1895!

But the quality of the image matters little if you can't have **quick access**. So we have invested in an enormous film-to-tape **transfer program** - putting thousands of hours of historical programming on D2 videotape, allowing us 24-hour turnaround.

And we learned, as producers, that licenses must be worth more than the paper on which they are printed. So we have secured **valid copyrights** to the film, and we protect you accordingly.

Finally, with 40,000 hours of original film material, we asked ourselves a tough question: What does that mean? There is no content without context! So we've hired some new **experts** . . . and designed a new **database** . . . and launched a new **website** . . .

*and set the stock footage world on fire!*

# DigiFlex 1000 Series

**“Digital, Analog, Audio & Video  
In the same frame”**  
**Five-Year Warranty**

We've always produced the very best product. It's not really our place to say. But if we were willing to say it, how would we substantiate it? First we'd tell you about our 1000 series DigiFlex digital and analog products. And we'd mention that the model 1000 frame has several monitoring circuits for fault detection. Digital and analog distribution and processing in the same frame provides for future system expansion. We'd tell you that all of our products undergo rigorous testing. And about our FIVE-YEAR WARRANTY. But that's all we'd say. Not that we couldn't say more. But we'd prefer to quietly keep making our products better and better.

# Description of Station Directory

## THE STATION MAPS

The only official and uniform rough guide to a station's physical coverage is found in the files of the Federal Communications Commission. Each TV station grantee is required to submit to the Commission its coverage contours predicted on the basis of engineering formulas designated by the Commission. The FCC specifies three grades of service as a general indication of the probable quality of reception.

The FCC does not intend or expect the predicted coverage contours, submitted by each station, to reflect whether a signal is received or not received at any specific location. Rather, the Commission regards the contours as a general guide to probable reception. The basic use made by the Commission of the contours is as a tool to determine where to allocate channels to minimize interference among stations.

Though all stations and applicants are required to submit predicted contours to the FCC, stations may also file contours based on actual measurements of transmitted signals. Under FCC rules, such filings are not mandatory, and only a relatively few stations have offered such measurements voluntarily. The Commission has no official and uniform rules for measuring service contours; such submissions are associated with stations' files but are not given official status by the Commission.

The maps are intended to serve as guides. It should be emphasized that the use of maps for legal proceedings, such as those before the FCC,

may require precision greater than that reasonably obtainable in maps of the size employed in the *Factbook*.

The three grades of predicted contours required by the FCC are as follows:

**Grade B Service:** The quality of picture expected to be satisfactory to the median observer at least 90% of the time for at least 50% of the receiving locations within the contour, in the absence of interfering co-channel and adjacent-channel signals.

**Grade A Service:** Satisfactory service expected at least 90% of the time for at least 70% of the receiving locations.

**Principal City Service:** Satisfactory service expected at least 90% of the time for at least 90% of the receiving locations.

We obtained the predicted contour maps from the FCC files or from the stations. We publish two contour lines, "Grade A" and "Grade B."

## NIELSEN TV STATION CIRCULATION

The *Average Weekly Circulation* estimates are based on NSI (Nielsen Station Index) diary households from the most recent February, May, July and November survey periods. These Sunday-Saturday 7 a.m.-1 a.m. average quarter-hour tuning shares are based on commercial television stations only.

All viewing numbers include only those estimates which surpass 5%. The *Station DMA Total* estimates are for viewing within the station's Designated Market Area, as defined by Nielsen. The *Other DMA Total* estimates are for viewing in a Designated Market Area other than the station's. The *Grand Total* estimates are a sum of the Station and Other DMA totals. Some stations have no viewing over 5% outside the station DMA, and therefore do not show all three categories.

## DEFINITIONS OF NIELSEN TERMS

**Designated Market Area**—An area comprised of all counties wherein the combined share of audience for the home market commercial station(s) is larger than the combined share of audience for any station(s) assigned to another home market.

**Television Households**—A television household is an occupied dwelling unit having one or more television sets. Updated estimates of TV households in each county, rounded and expressed in tens, are prepared annually by the Nielsen Research Department. Those estimates are derived by applying percent television set ownership estimates, county by county, to the estimates of total households made by Market Statistics.

**Cable Television Households**—A cable television household is an occupied dwelling unit which subscribes to some level of delivery service for television signals, rounded and expressed in tens.

**Non-Cable Television Households**—A television household which receives broadcast television signals, rounded and expressed in tens.

**TV Penetration**—The percent of total homes having one or more television sets at the time of the surveys. TV penetration uses current regional penetration estimates derived by the Advertising Research Foundation from U.S. Bureau of the Census surveys conducted in accordance with ARF specifications.

**Average Weekly Circulation**—The estimated average number of different television households viewing a particular station at least once per week, Monday-Sunday, Sign-on to Sign-off.

**Average Daily Circulation**—The estimated average number of different television households reached by a particular station on each day of the week, Sign-on to Sign-off.

## SURVEY METHODS, DESCRIBED BY NIELSEN

Nielsen collects household tuning over a four week measurement period using a diary methodology. Telephone calls are made to a sample of listed and unlisted telephone numbers in the survey area. The telephone calls enlist the cooperation of the household for a one week survey, verify names and addresses among listed households and obtain names and addresses for unlisted households. In addition, the households are asked

several basic questions regarding their household composition and television set ownership. Diaries are mailed to all households where an address is available. Reminder phone calls are made and mailings sent during the diary-keeping week to encourage the household to record their tuning and return the completed diary.

As diaries are returned, they are edited using established procedures and are entered into a computer system for processing. In order to compensate for differences in response rates, a weighting methodology is used to adjust the final intab sample data so that the weighted sample is in balance with the universe for various household characteristics—including geography. NSI measures the viewing in over 200 television markets across the United States at least four times a year.

## EXPLANATION OF FCC SYMBOLS

FCC Filing Symbols:

1. BPCT: Broadcast Permit Commercial Television.
2. BMPCT: Broadcast Modification of Permit Commercial Television.
3. DOC: Docket (designation applied by FCC to hearing cases).
4. GRANTED: Date of authorization by FCC.

**Note:** "BPCT" and "BMPCT" designations, accompanied by numbers, are affixed by the FCC to applications for new or changed station facilities to identify each when it is accepted for filing. They therefore constitute file numbers. Each map in the Factbook is accompanied with its file number to facilitate reference to the Commission's official files. In each case, the file number used is the one affixed to the application for facilities which were subsequently authorized by the FCC and in use at the time this Factbook was published. "Docket" numbers are used in those few cases where the application was in a hearing status and a file number had not been assigned. The "granted" date indicates when the FCC approved construction of facilities involved.

After a station is completed according to the terms of its construction permit, it receives a license; this is identified by a number with a "BLCT" (Broadcast License Commercial Television) prefix. When a license is renewed, a number with a "BRCT" (Broadcast Renewal Commercial Television) prefix is employed. Applications for licenses or license renewals do not include requests for changes in facilities, thus do not affect predicted Grade A & B contours. Therefore, they are not employed as references in the Factbook.

The Grade A & B contours on the maps are predicted by station engineers according to the formulas designated by the FCC, as previously explained. They are based on facilities authorized or in use by stations at the time of Factbook publication.

Latitude and longitude coordinates on the station pages are taken from the FCC's official files. They currently are based on the North American Datum of 1927 (NAD 27). When the FCC converts records to reflect the North American Datum of 1983 (NAD 83), *The Factbook* will continue to reflect accurately the data as on file at the FCC.

# U.S. Television Station Index

Data updated to November 1, 1996 unless otherwise indicated. Includes rate digests, personnel, facilities and other data.

## THE STATE PAGES

Following the map of each state, rankings for Nielsen's Designated Market Area Television Households are shown. DMA Household Rank is established by Nielsen.

The state pages also carry additional cross-reference material, indicating for example, those stations within the state that are identified with two or more cities, or with cities in another state.

Operating commercial and educational TV stations by VHF and UHF are shown for each state in a status report as of November 1, 1996.

Alabama	A-17
Alaska	A-48

## STATION PAGES

Rates, personnel and other data supplied by stations.

**RATE DIGESTS:** These show only the highest one-time rate charged by the stations. Most rates are also subject to frequency discounts, separate or additional rehearsal charges, talent & production charges, etc. For further details and for contract conditions, specifications etc., consult complete station rate cards, available from the stations on request.

**STATION POWER:** Powers shown are Effective Radiated Powers (ERP).

**NIELSEN DATA:** The individual stations show Total TV Households, both cable and non-cable, Average Weekly Circulation totals and an Average Daily Circulation total. For definitions of Nielsen terms, consult Description of Station section. These totals are shown for circulation within the station DMA and outside it, where applicable.

**SATELLITE STATIONS** are shown with a dash line pattern in relation to the parent listing. In the satellite listing the parent station is shown with a dash line pattern.
