

DEPARTMENT OF COMMERCE

RADIO SERVICE BULLETIN

ISSUED MONTHLY BY BUREAU OF NAVIGATION

Washington, June 1, 1923—No. 74

CONTENTS.

	Page.		Page.
Abbreviations.....	1	Miscellaneous—Continued.	
New stations.....	2	Transoceanic rates for traffic through stations of the Radio Corporation of America.....	16
Alterations and corrections.....	5	Radio frequency indicator for broadcasting stations.....	16
Miscellaneous:		Audio-frequency amplifier unit.....	17
Licenses of amateur operators suspended.....	15	Tests of radio receiving sets.....	17
Alaskan stations reopened for summer season.....	15	Short radio waves transmitted in beamlike searchlight reduce interference.....	18
Introduction of summer time in Great Britain and Ireland.....	15	References to current radio periodical literature.....	19
Information from the Berns bureau.....	15	Radio signals of standard frequency.....	22
Land-line telegraph rates for traffic by Wilmington (Calif.) (KSR) station of the Radio Corporation of America.....	16		

ABBREVIATIONS.

The necessary corrections to the List of Radio Stations of the United States and to the International List of Radiotelegraph Stations, appearing in this bulletin under the heading "Alterations and corrections," are published after the stations affected in the following order:

- Name =Name of station.
 Loc =Geographical location. O=west longitude. N=north latitude. S=south latitude.
 Call =Call letters assigned.
 System =Radio system used and sparks per second.
 Range =Normal range in nautical miles.
 W. l. =Wave lengths assigned: Normal wave lengths in italics.
 Service =Nature of service maintained.
 PG=General public.
 PR=Limited public.
 RC=Radio compass station.
 P=Private.
 O=Government business exclusively.
 Hours =Hours of operation:
 N=Continuous service.
 X=No regular hours.
 m=a. m. (12 m=midday).
 s=p. m. (12 s=midnight).
 Rates =Ship or coast charges in cents: c.=cents. (The rates in the international list are given in francs and centimes.)
 I. W. T. Co.=Independent Wireless Telegraph Co.
 R. C. A. =Radio Corporation of America.
 S. O. R. S.=Ship Owners' Radio Service.
 C. w. =Continuous wave.
 I. c. w. =Interrupted continuous wave.
 V. t. =Vacuum tube.
 FX =Fixed station.
 U. S. L. =After operating company denotes that the change applies only to the List of Radio Stations of the United States.
 Kc. =Kilocycles.

NEW STATIONS.

Commercial land stations, alphabetically by names of stations.

[Additions to the List of Radio Stations of the United States, edition of June 30, 1922, and to the International List of Radiotelegraph Stations published by the Berns bureau.]

Station.	Call signal.	Wave lengths.	Service.	Hours.	Station controlled by—
Basco, P. I. ¹	KZAB	600, 1200, 1500, 1800, 2400.	PG	Philippine Insular Government.
Hillsboro, Oreg.....	KEK	PG	Federal Telegraph Co.
Madison, Wis. ²	WHA	1200.....	PX	X	University of Wisconsin.

¹ Loc. (approximately) 0.121° 59' 00", N. 20° 27' 30"; range, 80; system, R. C. A., 1000; hours, 8 a. m.—12 noon and 2–5.30 p. m., ship schedule first and last 10 minutes of each hour, subject to change; rates, ship service, 12 c. per word.

² Loc. (approximately) 0.89° 23' 45", N. 43° 04' 30"; range, 200; system, composite, v. t. telegraph; rates, none.

Commercial ship stations, alphabetically by names of vessels.

[Additions to the List of Radio Stations of the United States, edition of June 30, 1922, and to the International List of Radiotelegraph Stations published by the Berns bureau.]

Name of vessel.	Call signal.	Rates.	Service.	Hours.	Owner of vessel.	Station controlled by—
Alaska.....	KFIM
Berkshire.....	KFIE	8	PG	Merchants & Miners Transportation Co.
Buford.....	KFII
Caesar ¹	KFIA	8	PG	X	Coastwise S. S. & Barge Co.	I. W. T. Co.
Carolyn Frances ²	KFHO	8	PG	X	Western Whaling & Trading Co.	R. C. A.
City of Benton Harbor.....	WDV	PG	X	Graham & Morton Transportation Co.	Do.
City of Grand Rapids.....	KFIS	PG	X	do.....	Do.
City of St. Joseph.....	KFIT	PG	X	do.....	Do.
Francis E. Powell.....	KFIG	PG	X	Bethlehem Shipbuild- ing Corp.
Joseph D. Wood ³	KFIH	8	PG	X	Wood Towing Co.....	Owner of vessel.
Leviathan.....	WSN	8	PG	N	U. S. S. B.....
Tillicum.....	KFIN	American Tug Boat Co.

¹ Range, 300; system, Navy—R. C. A., 1000; w. l., 300, 600, 706.

² Range, 150; system, R. C. A., 1000; w. l., 300, 600, 706.

³ Range, 150; system, Wireless Specialty Apparatus Co., 1000; w. l., 300, 600, 701.

Commercial land and ship stations, alphabetically by call signals.

[b=ship station; c=land station.]

Call signal.	Name.	Call signal.	Name.
KEK	Hillsboro, Oreg.....	KFIN	Tillicum.....
KFHO	Carolyn Frances.....	KFIS	City of Grand Rapids.....
KFIA	Caesar.....	KFIT	City of St. Joseph.....
KFIE	Berkshire.....	KZAB	Basco, P. I.....
KFIG	Francis E. Powell.....	WDV	City of Benton Harbor.....
KFIH	Joseph D. Wood.....	WHA	Madison, Wis.....
KFII	Buford.....	WSN	Leviathan.....
KFIM	Alaska.....		

RADIO SERVICE BULLETIN.

3

Broadcasting stations, alphabetically by names of cities.

[Additions to the List of Radio Stations of the United States, edition of June 30, 1922.]

City.	Call signal.	City.	Call signal.

ALTERATIONS AND CORRECTIONS.

COMMERCIAL LAND STATIONS.

[Alterations and corrections to be made to the List of Radio Stations of the United States, edition of June 30, 1922, and to the International List of Radiotelegraph Stations, published by the Bernese bureau.]

BARNEGAT, N. J. (Tuckerton).—W. l., 300, 600, 16700.
 BAYTOWN, TEX.—W. l., 300, 600, 706.
 BOLINAS, CALIF. (KPH).—System, R. C. A., c. w., i. c. w., and spark, 1000.
 CHEBOYGAN, MICH.—W. l., 300, 600, 1599.
 CLEVELAND, OHIO.—W. l., 300, 600, 1817.
 CORAM HILL, N. Y.—W. l., 17500.
 DEARBORN, MICH.—W. l., 300, 600, 1713.
 EAST MORICHEE, N. Y.—W. l., 300, 600, 2500.
 EAST PITTSBURGH, PA.—W. l., 1817.
 EL DORADO, KANS.—W. l., 1599.
 EVERETT, WASH.—Accounts for message charges should be forwarded to the American Tug Boat Co., in lieu of the S. O. R. S.
 FALSE PASS, ALASKA.—W. l., 300, 525, 600, 1650.
 HILLSBORO, OREG.—W. l., 300, 600, 4120, 6175, 8500.
 LUDINGTON, MICH.—W. l., 300, 450, 600, 1666. Limited commercial service with Manistique and Frankfort, Mich., Manistowoc and Milwaukee, Wis., on 1666 meters.
 NORTHVILLE, MICH.—W. l., 300, 600, 1713.
 OAKLAND, CALIF.—W. l., 143.
 OWENSBORO, KY.—W. l., 1790.
 PALO, ALTO, CALIF.—W. l., 3554, 3900, 4300, 4785, 5720, 7587.
 PRINCETON, IND.—W. l., 1790.
 QUINCY, MASS.—W. l., 1966.
 SAN FRANCISCO, CALIF. (portable) (KTA).—W. l., 143, 300, 600.
 SAN FRANCISCO, CALIF. (KUO).—W. l., 143, 300, 600, 690.
 SPRINGFIELD, MASS.—W. l., 1817.
 ST. CROIX FALLS, WIS.—W. l., 1764.
 Strike out all particulars of the following-named stations: Fort Worth, Tex.; San Diego, Calif.; and Savannah, Ga.

COMMERCIAL SHIP STATIONS, ALPHABETICALLY BY NAMES OF VESSELS.

[Alterations and corrections to be made to the List of Radio Stations of the United States, edition of June 30, 1922, and to the International List of Radiotelegraph Stations, published by the Bernese bureau.]

ABNER COBURN.—W. l., 300, 600.
 ACROPOLIS.—Name changed to Washington; Nicholas P. Antoniadis owner of vessel.
 ADVANCE.—J. Abbott Nile owner of vessel; station operated and controlled by R. C. A.; rates, 8 cents per word.
 A. E. R. SCHNEIDER.—W. l., 300, 600, rates, Great Lakes service, 2 cents per word.
 AFONDBRIA.—Range, 300; system, Navy-Wireless Specialty Apparatus Co., 1000; W. l., 300, 450, 600.
 AGWIMARS.—W. l., 300, 450, 600.
 ALADDIN.—W. l., add 706.
 ALAMEDA (KOBN).—Station operated and controlled by R. C. A.
 ALL AMERICA.—W. l., add 706.
 ALLEGHANY.—Range, 300; system, R. C. A., 1000; w. l., 300, 450, 600, 706.
 AMERICAN STAR.—System, Navy-R. C. A., 1000.
 ANNETTA.—W. l., add 706.
 ANTIPTAM.—Station operated and controlled by R. C. A. (U. S. L.).
 ABAPAHOE (KVB).—W. l., add 706.
 ARCTIC.—Range, 300; system, R. C. A., 1000; w. l., 300, 600, 1800.
 ARGON.—W. l., add 706.
 ARIZONAN.—W. l., add 706.
 BALSAM.—W. l., add 706.
 BARACOA.—System, Navy-R. C. A., 1000; w. l., add 706.
 BELVIDERE.—W. l., 300, 450, 600, 706.
 BETHORE.—Guaranty Trust Co., owner of vessel.
 BOGOTA.—W. l., 300, 450, 600, 706.
 BOHEMIAN CLUB.—Station operated and controlled by R. C. A.
 BOLIVAR.—Columbian S. S. Co., owner of vessel; w. l., add 706.
 BRANDFORD.—Name changed to Alden Anderson.

- BROOKDALE.**—System, Navy, 1000; station operated and controlled by S. O. R. S. (U. S. L.); rates, North and South American service, 4 cents per word.
- BUTTERFIELD.**—W. l., 300, 450, 600, 706.
- CACIQUE.**—W. l., add 706.
- CANIBAS.**—Station operated and controlled by R. C. A. (U. S. L.).
- CARACAS.**—W. l., add 706.
- CARRABULLE.**—W. l., add 706.
- CASSIMIR.**—Range, 300; system, Navy—R. C. A., 1000; w. l., 300, 450, 600, 706; Curtis Bay Copper & Iron Works owner of vessel.
- CASTLE POINT.**—System, Navy—R. C. A., 1000; w. l., 300, 450, 600, 706; Charles R. McCormick S. S. Co. owner of vessel; station operated and controlled by I. W. T. Co. (U. S. L.).
- CATAHOULA.**—W. l., add 706.
- CENTAURUS.**—System, R. C. A., 1000; w. l., 300, 450, 600, 706; Planet S. S. Corp. owner of vessel.
- CHARLES M. EVEREST.**—W. l., add 706.
- CHARLES R. McCORMICK.**—System, Navy, 1000; w. l., 300, 450, 600.
- CHESTER VALLEY.**—System, Navy—Wireless Specialty Apparatus Co., 1000.
- CHICKASAW.**—System, Navy—Wireless Specialty Apparatus Co., 1000.
- CHILKAT.**—Range, 150; system, R. C. A., 1000; w. l., 300, 600; station operated and controlled by owner of vessel; rates, 8 cents per word.
- CITY OF ST. JOSEPH.**—W. l., add 706.
- CITY OF ST. LOUIS.**—W. l., add 706.
- CHINA.**—System, R. C. A., 1000.
- CHINCHA.**—Planet S. S. Corp. owner of vessel.
- CITY OF ALAMEDA.**—Name changed to W. F. Burdell; Pure Oil S. S. Co. owner of vessel.
- COLLAMER.**—W. l., add 706.
- COMANCHE.**—W. l., add 706.
- COMET.**—Range, 300; w. l., add 706; Standard Transportation Co. owner of vessel.
- CONEHATTA.**—W. l., add 706.
- CORVUS.**—W. l., add 706.
- CRETAN.**—W. l., add 706.
- CROSS KEYS.**—System, Navy—R. C. A., 1000; w. l., 300, 450, 600; station operated and controlled by I. W. T. Co. (U. S. L.).
- CUPRUM.**—Range, 300; system, Federal arc; w. l., 300, 600, 1800.
- DERBYLINE.**—Texas Co. owner of vessel.
- DEROCHE.**—System, Navy—Lowenstein, 1000; w. l., 300, 450, 600; station operated and controlled by R. C. A.
- DE SOTA.**—Correct orthography De Soto.
- D. F. McALLISTER.**—Station operated and controlled by I. W. T. Co.
- DILLWYN.**—System, Navy—R. C. A., 1000; w. l., add 706; Malston Co., owner of vessel; station operated and controlled by I. W. T. Co.
- DOCHRA.**—W. l., add 706.
- DOROTHY LUCKENBACH.**—W. l., 300, 450, 600, 706.
- DUNGANNON.**—Texas Co., owner of vessel.
- EASTERN TEMPEST.**—W. l., add 706.
- EDWARD PIERCE.**—Correct orthography Edward Peirce.
- EGLANTINE.**—W. l., add 706.
- EL CAPITAN (KKH).**—W. l., add 706.
- ELLENOR.**—W. l., add 706.
- EL SOL.**—W. l., add 706.
- ENSLEY CITY.**—W. l., add 706.
- ESPERANZA.**—W. l., add 706.
- F. Q. BARSTOW.**—System, R. C. A., 1000.
- FREDERIC R. KELLOGG.**—System, R. C. A., 1000.
- GARFIELD.**—W. l., add 706.
- GENERAL O. H. ERNST.**—W. l., add 706.
- GENERAL W. C. GORGAS.**—W. l., add 706.
- GEORGE L. OLSON.**—Range, 200; system, Gray & Danielson, 240; w. l., 300, 600; station operated and controlled by owner of vessel; rates, 8 c. per word.
- GEORGE WASHINGTON.**—W. l., add 706.
- GLEN RIDGE.**—W. l., add 706.
- GLOUCESTER.**—W. l., add 706.
- GRIFFDU.**—W. l., 300, 450, 600.
- HARRIS.**—System, Navy—R. C. A., 1000; w. l., 300, 450, 600, 706; station operated and controlled by I. W. T. Co. (U. S. L.).

- MOBILE CITY.—W. l., add 706.
- MOHAWK (KVM).—W. l., add 706.
- MONGOLIA.—W. l., add 706.
- MOUNT BAKER.—Red Salmon Canning Co., owner of vessel.
- MOUNT CARROLL.—W. l., add 706.
- MOUNT CLAY.—W. l., add 706.
- MUNATREE.—W. l., add 706.

- MUNRIG.—System, Cutting & Washington, 1000; w. l., 300, 450, 600, 706; station operated and controlled by I. W. T. Co.
- NANTUCKET.—W. l., add 706.
- NOMA.—8 c. per word.
- NORMAN BRIDGE.—System, R. C. A., 1000.
- NUSHAGAK.—Range, 150; system, R. C. A., 1000.
- OLEN.—W. l., add 706.
- ONTARIO.—W. l., add 706.
- PAN-AMERICA.—W. l., add 706.
- PARAGUAY.—Sun Oil Co., owner of vessel.
- PATRICK HENRY.—Station operated and controlled by I. W. T. Co.
- PEARLDON.—Atlantic Refining Co., owner of vessel.
- PENNSYLVANIA.—W. l., add 706.
- PENOBSCOT.—W. l., add 706.
- PERSIAN.—W. l., add 706.
- PHILADELPHIA (KSM).—W. l., add 706.
- PHYLLIS.—Range, 150; system, R. C. A., 1000; w. l., 300, 600; rates, 8 c. per word.
- PLYMOUTH (KND).—Range, 150; system, R. C. A., 1000; w. l., 300, 600; Plymouth S. S. Co. owner of vessel.
- PONCE.—W. l., add 706.
- PORTO RICO.—W. l., add 706.
- PRESIDENT FILLMORE.—System, Federal arc and Navy-R. C. A., spark, 1000; w. l., 300, 450, 600, 706.
- PRESIDENT HARDING.—System, Navy-R. C. A., 1000; w. l., 300, 450, 600; station operated and controlled by S. O. R. S.
- PRESIDENT MONROE.—W. l., add 706.
- PRESIDENT POLK.—W. l., add 706.
- PRESIDENT ROOSEVELT.—W. l., add 706.
- PRESIDENT VAN BUREN.—W. l., add 706.
- PUGET SOUND.—W. l., 300, 450, 600, 706.
- RANSOM B. FULLER.—W. l., add 706.
- RESTLESS.—A. S. Cochrane owner of vessel.
- RICHCONCAL.—W. l., 300, 450, 600, 706.
- ROBIN GRAY.—W. l., 300, 450, 600.
- ROBIN HOOD.—W. l., add 706.
- ROOSEVELT.—Range, 150; system, Navy-Kilbourne & Clark, 1000; w. l., 300, 450, 600; service, PG; hours, X; station operated and controlled by owner of vessel; rates, 6 c. per word.
- SAN JACINTO.—W. l., add 706.
- SAN JUAN (KULV).—Station operated and controlled by owner of vessel.
- SAN LORENZO.—W. l., add 706.
- SANTA ANA (WAL).—Santa Ana S. S. Co. owner of vessel.
- SANTA ANA (WBX).—W. l., add 706.
- SANTA LUISA.—System, R. C. A., 1000.
- SANTA CECILIA.—W. l., add 706.
- SANTA CLARA.—W. l., add 706.
- SANTA ISABEL.—W. l., add 706.
- SANTA PAULA.—W. l., add 706.
- SANTA ROSA.—W. l., add 706.
- SANTA TERESA.—W. l., add 706.
- SAUGUS.—W. l., add 706.
- SCHODACK.—W. l., add 706; station operated and controlled by I. W. T. Co. (U. S. L.).
- SEA MONARCH.—System, R. C. A., 1000; rates, 8 c. per word.
- SELMA CITY.—System, R. C. A., 1000.
- SIBONEY.—W. l., add 706.
- SIERRA.—S. S. Freeman owner of vessel.
- SIXAOLA.—W. l., add 706.
- S. M. SPALDING.—System, R. C. A., 1000.
- S. O. Co. No. 93.—System, R. C. A., 240.
- SOCONY.—System, R. C. A., 1000.
- SOCONY 82.—System, R. C. A., 1000.
- SOCONY 84.—W. l., 300, 450, 600.
- SOCONY 89.—System, R. C. A., 1000.
- SOCONY 90.—System, R. C. A., 1000.
- SOCONY 92.—System, R. C. A., 1000.
- SOUTHERN CROSS.—W. l., add 706.

RADIO SERVICE BULLETIN.

9

- STANLEY DOLLAR.—System, R. C. A., 1000; w. l., 300, 450, 600; hours, X; rates, station operated and controlled by I. W. T. Co.
- STAR OF FRANCE.—Range, 150; system, R. C. A., 1000; w. l., 300, 450, 600; station operated and controlled by owner of vessel; rates, 8 c. per word.
- STAR OF ITALY.—Range, 150; system, R. C. A., 1000; w. l., 300, 450, 600; station operated and controlled by owner of vessel; rates, 8 c. per word.
- STAR OF SCOTLAND.—Range, 150; system, R. C. A., 1000; w. l., 300, 450, 600; station operated and controlled by owner of vessel; rates, 8 c. per word.
- STEEL SEAFARER.—W. l., add 706.
- STEPHEN R. JONES.—W. l., add 706.
- ST. KATHERINE.—Range, 200; system, Halcutt, 240; w. l., 300, 600; station operated and controlled by owner of vessel; rates, 8 c. per word.
- SUDBURY.—W. l., add 706.
- SURINAME.—System, composite, 1000; w. l., add 706.

MISCELLANEOUS.

LICENSES OF AMATEUR OPERATORS SUSPENDED.

Recently the license of an amateur operator was suspended for a period of three months on account of the operator being examined within three months after a prior examination in which he failed to pass, which constituted a violation of regulation 133 of the Radio Communication Laws of the United States, which reads, in part, as follows: "No applicant who fails to qualify will be reexamined at any examining office within three months from date of the previous examination. * * * When the records of the bureau develop the fact that an applicant has failed to qualify and has applied for reexamination or been reexamined at the same or another office within three months, his existing license may be suspended or revoked by the Secretary of Commerce."

In another case an amateur operator had his operator's license and station license suspended for one year for violation of section 7 of the act of August 13, 1912, in that he transmitted a false distress signal (SOS).

ALASKAN STATIONS REOPENED FOR SUMMER SEASON.

Chignik (KHC), opened May 7; Chignik (KNP), opened May 3; Kvichak (KHB), opened May 24; Lazy Bay (KEPS) opened May 14; Naknek (KHT), opened May 21; Pilot Point (KUDT), opened May 23; Rose Inlet (KJC), opened May 8; Tee Harbor (KQP), opened May 14; Uyak (KHA), opened April 26; and Yes Bay (KRU), opened May 3.

INTRODUCTION OF SUMMER TIME IN GREAT BRITAIN AND IRELAND.

Notice has been received by this office that "summer time" which is one hour in advance of Greenwich mean time, will be kept in Great Britain (including the Channel Islands and the Isle of Man) and Ireland (Northern Island and the Irish Free State) until further notice. Normal time will be resumed at 0200 G. M. T. (civil) on September 16, next, unless otherwise changed.

INFORMATION FROM THE BERNE BUREAU.

Australia.—General call VZDW has been assigned to all vessels operated by the Amalgamated Wireless Co. (Ltd.), to be used by coast and ship stations desiring to ascertain whether there is a vessel of the same company within range in order that communication may be established with as little delay as possible.

France.—The coast station Rochefort-sur-Mer was opened on April 20, last, to general public correspondence.

Greece.—The coast station Kerkyra No. 3 is open to general public correspondence.

Belgium.—The legal time in this country was advanced one hour on April 23, last, until further notice.

British Indies.—The coast station at Victoria Point is not open continuously any longer. The new hours are from 0 to 02.30; 04.30 to 14.00; and from 16.00 to 24.00 G. M. T.

RADIO FREQUENCY INDICATOR FOR BROADCASTING STATIONS.

At the Second National Radio Conference, held in Washington from March 20 to 24, 1923, it was resolved, among other things, "That every broadcasting station should be equipped with apparatus, such as a tuned circuit coupled to the antenna and

taining the operating wave frequency within 2 kilocycles of the assigned wave frequency."

The Bureau of Standards has designed a preliminary model of a radio frequency indicator to meet the above need and has prepared specifications covering its construction. These specifications may be had by any broadcasting station upon request.

The instrument consists, essentially, of a 72-turn space-wound coil on a 3 $\frac{1}{2}$ -inch tube, an air condenser, and a sensitive thermogalvanometer. These three elements are connected in series. The condenser is a variable condenser provided with a locking device, so that it may be locked and soldered in position after the instrument has been adjusted to indicate the required frequency. This instrument may be set to indicate any radio frequency in the range from 1,320 kilocycles (222 meters) to 550 kilocycles (545 meters). If an instrument is constructed according to the specifications and sent to the Bureau of Standards radio laboratory by a licensed broadcasting station, it will be adjusted, for a nominal fee, to operate at the frequency of the station.

AUDIO-FREQUENCY AMPLIFIER UNIT.

The Bureau of Standards frequently receives requests for information regarding simple apparatus for audio-frequency amplification from persons who wish to construct such apparatus. To meet these demands there has been prepared Bureau of Standards Circular No. 141, Description and Operation of an Audio-Frequency Amplifier Unit for Simple Radio Receiving Outfits.

Announcement has previously been made of the publication of Circular No. 120, Construction and Operation of a Simple Homemade Radio Receiving Outfit, and Circular No. 121, Construction of a Two-Circuit Radio Receiving Equipment with Crystal Detector, and Circular No. 133, Description and Operation of an Electron Tube Detector Unit for Simple Radio Receiving Outfits.

One or two of the audio-frequency amplifier units described in Circular No. 141 can be used in connection with the apparatus described in these earlier circulars or in connection with other similar receiving apparatus which may be available for the purpose of amplifying the received signal and thus increasing the effective range of the set and the volume of sound in the telephone receivers. The most important parts of the amplifier unit described are an electron tube and an audio-frequency transformer. The cost of this audio-frequency amplifier unit, including the cost of the tube, will probably be between \$13 and \$21. This does not include the cost of batteries which may be required in addition to those already available.

A list is given of the material necessary for constructing the amplifier unit and also a description of the method of wiring and assembling the unit. Illustrations are given showing the arrangement of the various parts, and there is a photograph of the complete assembled unit. An illustration is also given which shows two of these amplifier units connected to the two-circuit set described in Circular No. 121 and the electron tube detector unit described in Circular 133.

A list is given of the symbols used to represent the different pieces of apparatus and parts of circuits shown in the illustrations appearing in the circulars mentioned above.

A copy of Circular 141 may be purchased for 10 cents from the Superintendent of Documents, Government Printing Office, Washington, D. C.

TESTS OF RADIO RECEIVING SETS.

During the past two years the radio laboratory of the Bureau of Standards has been developing methods of testing radio receiving sets and has made tests on receiving sets of a number of different types. The results of the tests on these sets are given in a series of letter circulars which are in preparation. The first letter circular in this series is designated as Letter Circular 90 and has recently been issued. The sets on which tests are therein described are regenerative sets using electron-tube detectors and are of the type intended for such use as the reception of continuous wave signals from arc transmitting stations on wave frequencies down to 60 kilocycles (wave lengths up to 5,000 meters). The Bureau of Agricultural Economics, U. S. Department of Agriculture, on account of its interest in the reception of crop, market, and weather reports by radio, has assisted in this investigation. The particular receiving sets studied are referred to by arbitrary reference numbers rather than by a statement of the manufacturers' names and type or model numbers. It is believed that the methods followed and the examples given in this circular will be of assistance to manufacturers in the development of methods of testing and describing their own products and thus

improving them. It is believed that purchasers will also be directly aided in deciding what features and characteristics to look for in the selection of apparatus.

A limited number of mimeographed copies of Letter Circular 90 are available and can be secured by those who are directly concerned with the testing of receiving sets by addressing the Bureau of Standards, Department of Commerce, Washington, D. C.

SHORT RADIO WAVES TRANSMITTED IN BEAMLIKE SEARCHLIGHT REDUCE INTERFERENCE.

Up to a few years ago radio communication was for the most part carried on from transmitting station to one receiving station; this is "point-to-point" communication. There were only a few special kinds of services, such as time and weather signals, in which messages transmitted by radiotelegraph from one station were received by a considerable number of receiving stations. However, signals were transmitted from a transmitting station in every direction and could, if desired, be received by any receiving station located within a certain distance, regardless of its direction. A comparatively small number of wave frequencies was sufficient to take care of traffic requirements. Practically all radio communication in the past has been carried on on wave lengths above 200 meters.

With the development of radiotelephone transmitting apparatus, the transmission of the voice or music broadcast by radio has assumed an important place in the radio field. Radio waves which are transmitting the voice or music occupy a wider band of wave frequencies than a "sharp" wave transmitting radiotelegraph signals. Because of this great increase in a kind of service which requires a wide band of wave frequencies there is already considerable interference among broadcasting stations and between broadcasting stations and radiotelegraph stations. This problem received attention at the radio conference which met in Washington in March at the invitation of Secretary Hoover, and the possibilities of using short waves for reducing interference received attention. Telephony requires a band of wave frequencies of a certain width, and at high frequencies, such as those corresponding to wave lengths of about 10 meters, a considerable number of such frequency bands or channels are available.

For point-to-point communication two important ways of reducing such interference are to direct the waves radiated from the transmitting stations in a narrow beam toward the receiving station and to use short wave lengths which are not at present employed. Some English investigators have recently reported on the results of their investigations on directive short-wave transmission.

Experiments have recently been conducted at the Bureau of Standards on transmitting apparatus, employing electron tubes, which transmits a directed beam of radio waves and employs waves as short as 10 meters. This system, therefore, offers substantial relief from interference difficulties. It also has possible military applications. The apparatus has been used for communication by both radiotelegraphy and radiotelephony.

In the experiments at the Bureau of Standards a reflector has been used consisting of short parallel vertical wires arranged on a frame shaped like a parabola. This reflector acts much as an ordinary mirror would for light waves. The radio waves are, in fact, the same kind of waves as light waves but of considerably longer length. Forty vertical wires were used, and the generating set with its small antenna was placed at the focus of the parabola. Each wire was tuned separately to 10 meters by adjusting its length. It was found that about 75 per cent of the radiated energy could be confined within an angle of about 40° .

There has recently been issued Bureau of Standards Scientific Paper No. 469, Directive Radio Transmission on a Wave Length of 10 Meters, by F. W. Dunmore and F. H. Engel. This paper describes the experiments which the authors have conducted at the bureau and gives the constructional details of the apparatus used, so that any person interested can duplicate the apparatus and the results obtained and continue in this line of investigation.

A copy of Bureau of Standards Scientific Paper No. 469 may be purchased for 10 cents from the Superintendent of Documents, Government Printing Office, Washington, D. C.

RADIO SIGNALS OF STANDARD FREQUENCY.

There is given below the schedule of standard frequency signals to be transmitted from the Bureau of Standards at Washington (station WWV). These signals should be of interest to all station operators who transmit on frequencies above 425 kilocycles, as they may be used for checking wave meters and adjusting transmitting and receiving apparatus. Their accuracy is better than three-tenths of 1 per cent. Information regarding the use of these signals was given in February (1923) issue of the Radio Service Bulletin. More detailed information is given in Bureau of Standards Letter Circular No. 92, which may be obtained on application to that bureau.

Commercial and ship stations should be especially interested in the 425, 500, and 600 kilocycle waves. The 425 kilocycles wave is the new frequency allocated by the Department of Commerce for commercial ship traffic; the remainder of the schedule includes the frequencies used by broadcasting and amateur stations. The transmission on the morning of October 7 is especially for amateur stations and includes only frequencies used by them. It will be helpful if amateur operators will stand by while the standard frequency signals are being transmitted on this date, so there will be as little interference as possible with their general reception.

In the schedule below the "general call" is given by voice during the first half of the four-minute period and by continuous wave telegraph during the second half; this call is given to enable listeners to tune in WWV. The "standard frequency signals" consist of the call letters WWV (- - - - -) repeated with very long dashes intervening and are transmitted by unmodulated continuous waves. The "announcements" are made by voice during the first half of the period and by continuous wave telegraphy during the latter half. The general call and the announcements are made on the same frequency as the standard frequency signals and may be used for some measurement purposes, but it is recommended that accurate measurements be made on the standard frequency signals only. With sensitive receiving apparatus it should be possible to receive these signals anywhere east of the Mississippi River.

Schedule of standard frequency transmission from WWV.

Eastern standard time.	Signal.	Kilocycles (wave length in meters).				
		June 11.	July 17.	Aug. 15.	Sept. 13.	Sept. 28.
10.55 to 11.04 p. m.	General call					
11.04 to 11.08 p. m.	Standard frequency	400	425	425	425	500
